

8. Screen sharing

Play content in a separate window and share that screen with the customer.

During a presentation, share the separate window with the customer and leave the Lumada Showcase itself in the background. When you switch to different content using "Edit/Play My Playlist" or "Recommended Playlist," you can show the content to the customer side without interruption and facilitate a smooth presentation.

**"Play Content
(a new window will open)" button**
for presentation

<Separate window (content play window)>

**Share the displayed screen
by using remote tools.**

Recommended usage

When sharing the screen, shut down any applications not required for the presentation to reduce the load placed on the network or PC.

In addition, make sure the shared screen is in the foreground (the top-most window).

* If the video or sound is interrupted while sharing a video, switch off screen sharing and then switch it on again.
